

The Database For Weight Management Services

# WeightLossManager

Faster / Easier / Better

The complete solution for service management, data capture & reporting

# Intuitive data entry with effective client management tools

- Accurately track individual attendance and performance records so that a more personal approach can be offered.
- Streamline client correspondence using the custom designed “mail merge” tools.
- All client baseline data is captured and progressively monitored including Height, Weight, BMI, Waist Circumference & BP.
- Track clients who have maintained their weight loss and report on all client follow up sessions to programme completion.
- Industry recognised assessment scores and formulas ( SF 36, PARQ, IPAQ, HE) can be configured with trend reports generated across these parameters.
- Client maintenance programmes are effectively supported including reporting and tracking of key performance markers.
- WeightLossManager can be tailored to meet the precise needs of your service.

Developed by North 51, a leading provider of healthcare software

# A comprehensive reporting suite for standard & bespoke reports

## Reports include:

- “Client achievement log” to track individual performance trends over defined periods.
- “Joining reports” highlighting details of all the clients entering your service.
- “Change reports” enabling your service to track specific changes in clinical markers over time.
- “Target reports” displaying service performance trends & patterns against targets such as average weight loss , waist measures and BP readings.
- “Follow up “ & “Waiting time” reports highlighting how your service is performing in these key areas.

### Join our increasing list of satisfied clients:

*“North 51 have worked closely with Lincolnshire NHS weight management service in order to develop a unique and highly specific database solution. Dealing with thousands of patient contacts each year, we required an IT system that could not only capture all of the baseline and routine measurements we take but also provide easy to use reports and data analysis. This allows us to performance manage both individual staff and the service as a whole at the click of a button. The development of this system has also improved security of patient records as we no longer rely on transporting written patient records across the county which have the potential to be lost or stolen and has resulted in cost saving by reducing the office administration requirement, hence freeing up resources in this area.”*

Matthew Broughton

Weight Management Programme Manager

Lincolnshire Community Health Services
